

## Research and Comparison Between <section> and <article> Tags:

Feature	<section>	<article>
Purpose	Groups related content under a thematic heading.	Represents a self-contained, independent piece of content.
Usage	Used to divide a page into logical sections, like chapters in a book.	Used for standalone content like blog posts, news articles, or forum posts.
Nesting	Can contain multiple subsections (<section> inside another <section>).	Typically contains a complete piece of content, often with its own heading.
Independence	Dependent on the surrounding content.	Can be syndicated or republished independently.

## 2. Block and Inline Elements in HTML5:

### Block Elements (take up the full width available)

- <div>
- <p>
- <h1> to <h6>
- <article>
- <section>
- <header>
- <footer>
- <aside>
- <nav>
- <main>
- <figure>
- <blockquote>
- <form>

### Inline Elements (only take up as much space as needed)

- <span>
- <a>
- <img>

- `<strong>`
- `<em>`
- `<abbr>`
- `<cite>`
- `<code>`
- `<label>`
- `<small>`
- `<sub>` and `<sup>`
- `<time>`
